

Maskin & Sikkerhet AS develops and produce unique solutions for safer and easier use of machinery and equipment.

Our brands:

Self-explanatory labeling systems for hydraulics, etc.

- standardized colors and symbols feature simplifies the use and training
- common solution regardless of manufacturer, machine type and drivers
- decals for marking features / control and auxiliary circuits
- heat shrink tubes for labeling tubes / pipes, etc.

Electronic management system for safety locking of quick couplers

- management of hydraulic valves for locking the quick couplers for all types of vehicles
- coordinating / same operation regardless of machine type and manufacturer
- sensor controlled warning of locking and position of individual locking devices
- up to 4 GC-quick couplers on the same machine

Distributor:

Akershus Traktor

Always correct function!

SafetyMark - a universal standard for all types of machinery and equipment!

Standardized features for increased safety:

- Always the same identity on Machine and Equipment!

F - Float position

T-line open - free return / drainage to filter / tank

B - Minus / lowering - always **blue ID**

B-port (not to be used for lifting function)

N - Neutral - locked position

NB! Always follow the safety instructions

A - Plus / lift - always **red ID**

A-port (closing / locking - transport position)

External valves are divided into groups: A - B - C

- Joystick Standard No. 1 and 2 ensures uniform operation.
- Same valve can be used for alternative outlets.

Standard Joystick (right)

ID levers / switches ID No. 1 to No. 8

The same identity on outlet and hoses:

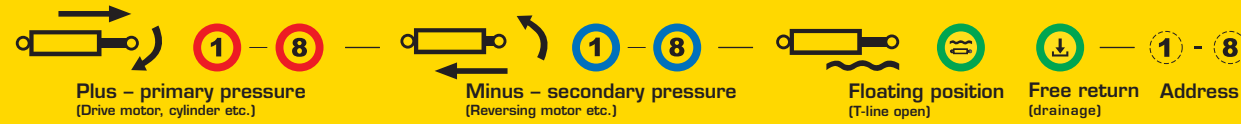

For proper labeling - Always follow the system descriptions!

- a unique safety system for better profitability!

- a guaranteed profitable investment!

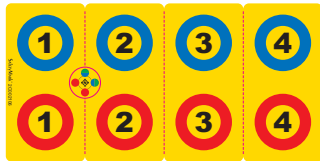

A self-explanatory system regardless of machine type, manufacturer, and language

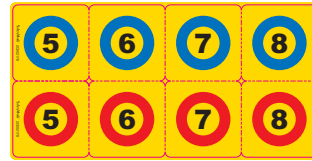

High quality products for safe and permanent marking:

Identifications stickers and ID-markers laminated for optimal protection.

- Standardized decal sets and connecting plans.

Standard connection plan w/ Joystick ID

Supplementary ID-markers

Connection plan with function symbols

Agri interiors with Joystick No. 1/2

Heat shrinkable tubes, made of UV resistant material for durable marking of hoses, pipes, etc.

- Flexible and durable material available in two dimensions, that cover hose and pipe sizes from OD 15 to 45 mm.

Heat shrinkable tubes in two dimensions

Minikit for easy startup and marking of pair of hoses

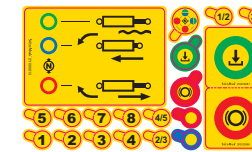

Equipment with 8 Hoses

System case and blisterpack

-markers attached

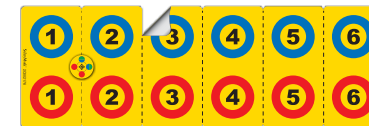

Startset - markers

Shrink tubes

Snow Blowers

Universal ID-markers in pairs separable

Details

SafetyMark simplifies work for everyone operating and repairing machines with additional hydraulics:

- Reduces shutdown time for connecting equipment when using more than 1 hydraulic hose.
- Reduces the oil spill and pollution of hydraulic oil and an environment friendly solution.

- Have you ever experienced that the equipment moves in the opposite direction intended?
- Have you ever connected and result back pressure when you have more than 2 hoses?
- Do you use more than 2 minutes to connect 8 pcs hoses correctly?

If the answer is **YES**, on one or more of the above - use the **SafetyMark** system!

Standardized labeling of T. Stangland Maskin AS
